

THE EVEREST DIFFERENCE

COLD FUSION

SUPERCHARGE YOUR ICE MAKER

WHAT IS COLD FUSION?

Cold Fusion, Everest's proprietary and patented technology, supercharges your ice maker. Instead of excess chilled water being dumped down the drain like our competitors, our technology recycles that water to be used to chill incoming warm water which creates more ice, using less electricity and extending the life of the ice maker.

WHAT ARE THE BENEFITS?

Up to 30% more ice created everyday*

Electricity savings up to 30%*

Can create up to 100,000 lbs more ice every year**

*Increased production and reduced power usage is based on an ice-maker equipped with Everest Cold Fusion component vs. an identical ice-makers without. **100,000 pounds more ice per year based on 1,800 pound/day ice-maker
